

EXTERNAL INTEGRATED SUMMATIVE ASSESSMENT EXEMPLAR 1A

STUDENT NAME & SURNAME	
ID NUMBER	
EISA REGISTRATION NUMBER	
ASSESSMENT CENTRE	
ASSESSMENT CENTRE	
ACCREDITATION NUMBER	
QUALIFICATION	Occupational Certificate: Maintenance Planner
SAQA ID	101874
CREDITS	261
NQF LEVEL	5
PAPER	1A (there are 3 papers to be written: 1A, 1B and 1C)
DATE OF EISA	
DURATION	3 Hours
TOTAL MARKS	165

GENERAL EISA RULES

- 1. Students are only allowed to use the supplied EISA booklets.
- 2. Students are only allowed to use a black pen for their answers.
- 3. Students to ensure that their name, surname and EISA registration number appears on the front cover of your EISA booklet.
- 4. This is a closed book examination; therefore, no other material or belongings are to be brought into the assessment centre. Should you bring any other material or belongings into the assessment centre, you will be required to leave such at the front of the assessment centre examination room. The assessment centre will not be held liable for any loss or damage to property brought into the assessment centre examination room.
- All EISA booklets must be handed back to the invigilator intact. No pages may be torn off from the EISA booklet. The removal of EISA booklets from the examination room is prohibited.
- 6. Students may make use of a calculator in this EISA.
- 7. Unless this is an online examination where access to a computer will be made available to you; the use of any communication devices, including smart watches, cell phones, tablets, i-Pads, headphones, and laptops are prohibited.
- 8. All cell phones are to be switched off for the duration of the EISA.
- The invigilator will not assist you with the explanation of questions related to the EISA.

Page 1 of 18 Exemplar 1A OC: Maintenance Planner (101874)

- 10. Students are prohibited from conversing in any manner with other students.
- 11. Students may not leave the examination venue within one hour of the start of the examination and in the last 10 minutes of the allotted examination period.
- 12. Students who are found to be disruptive and unruly in the assessment centre will be requested to leave the assessment centre by the invigilator.

I HEREBY CONFIRM THAT I HAVE READ THE ABOVE EISA RULES AND DECLARE THAT I UNDERSTAND AND ACCEPT THE RULES.

SIGNATURE OF STUDENT

CANDIDATE INSTRUCTIONS

- Candidates must complete all questions in this EISA.
- Candidates must ensure that they use only a black pen when completing this EISA.
- Should you require additional space to complete your answer, please request additional
 paper from your invigilator. Ensure that you indicate your name, surname and EISA
 registration number at the top of the additional paper. Also ensure that the question
 number is clearly marked on your additional paper.

Question 1.3 Schedule planned activities.

Question 1.3.1

scheduling.	(10)
	*

a) Describe what scheduling is, how it is coordinated and list items that must be in place when

the master schedule.	(20)
	_
	_
	-

b) Outline the process of compiling master schedules and give examples of what should be on

Question 1.3.2

It is Monday morning, the Maintenance Supervisor issues corrective maintenance work order / job card to a Mechanical Fitter to replace bearings on a motor. This motor must be removed and taken to maintenance workshop for this task to be carried out. Upon arrival on site the Maintenance Fitter informs the Production Supervisor on the day that he will need few hours to remove the motor to replace the bearing. The Production Supervisor was surprised and advised that he was not informed and he cannot release the equipment because it will disrupt the Production output planned for the day.

The Production Supervisor informs the Mechanical Fitter that the equipment can be released at the end of the shift when the factory closes. The Mechanical Fitter then arranges after hours overtime to carry out this task. After hours when the Mechanical Fitter was about to start removing the motor, he realize that he needs an Electrician to disconnect the motor and he has not made arrangement with Electrician to be available for overtime. The Mechanical Fitter could not remove the motor due to the unavailability of the Electrician.

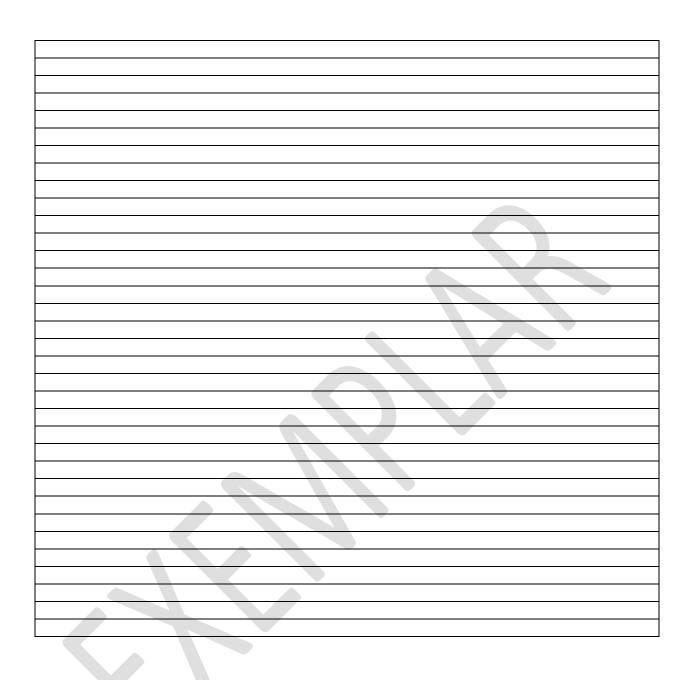

The next morning on Tuesday, the Maintenance Fitter informs to the Maintenance Supervisor that he could not do the task because he forgot to arrange with Electrician to be available after hours to disconnect the motor. The arrangement is made for the Electrician to be available after hours since the Production Department can only release the equipment at end of the shift. At the end of the shift the Electrician disconnect the motor and the Mechanical Fitter also decouple the motor. The Maintenance Fitter then realize that the motor requires the forklift to be taken to the workshop and the forklift was not available.

They then had to wait till next morning to get the forklift. On Wednesday morning when the forklift was available the motor was then taken to the workshop. On Wednesday morning the Production Department wanted to start the shift and they could not because the motor has been removed and the task was not completed by maintenance team. There was production loss on that day. The Mechanical Fitter then began to strip the motor and remove the old bearings. Thereafter he went to the maintenance stores to get the bearings. The store man advised the Mechanical fitter that the bearings are not available, and he was not made aware to place order. The store man then places an order and was informed by the supplier that the bearings will be only available next day late afternoon.

On Thursday morning the Production Department was informed that they are waiting for bearing from the supplier to be delivered late in the afternoon. The Production Department was affected for the day. The bearings were later delivered and were replaced. The Mechanical Fitter installed back the motor and the electrician reconnected the motor. The installation was completed late on Thursday afternoon and handed over the equipment to Production Department the next morning. The Production Department only resumed production of Friday morning.

Given the scenario above answer the following:

Identify key scheduling constrains and possible root causes.	(5)
)
	_
Make recommendations for improvement and how to prevent reocci	urrence of the prob
areas identified.	(10)

Question 1.3.3

Define the master schedule implementation approval process and role players. (10)
